

# COMPREHENSIVE CLOUD-BASED SECURITY

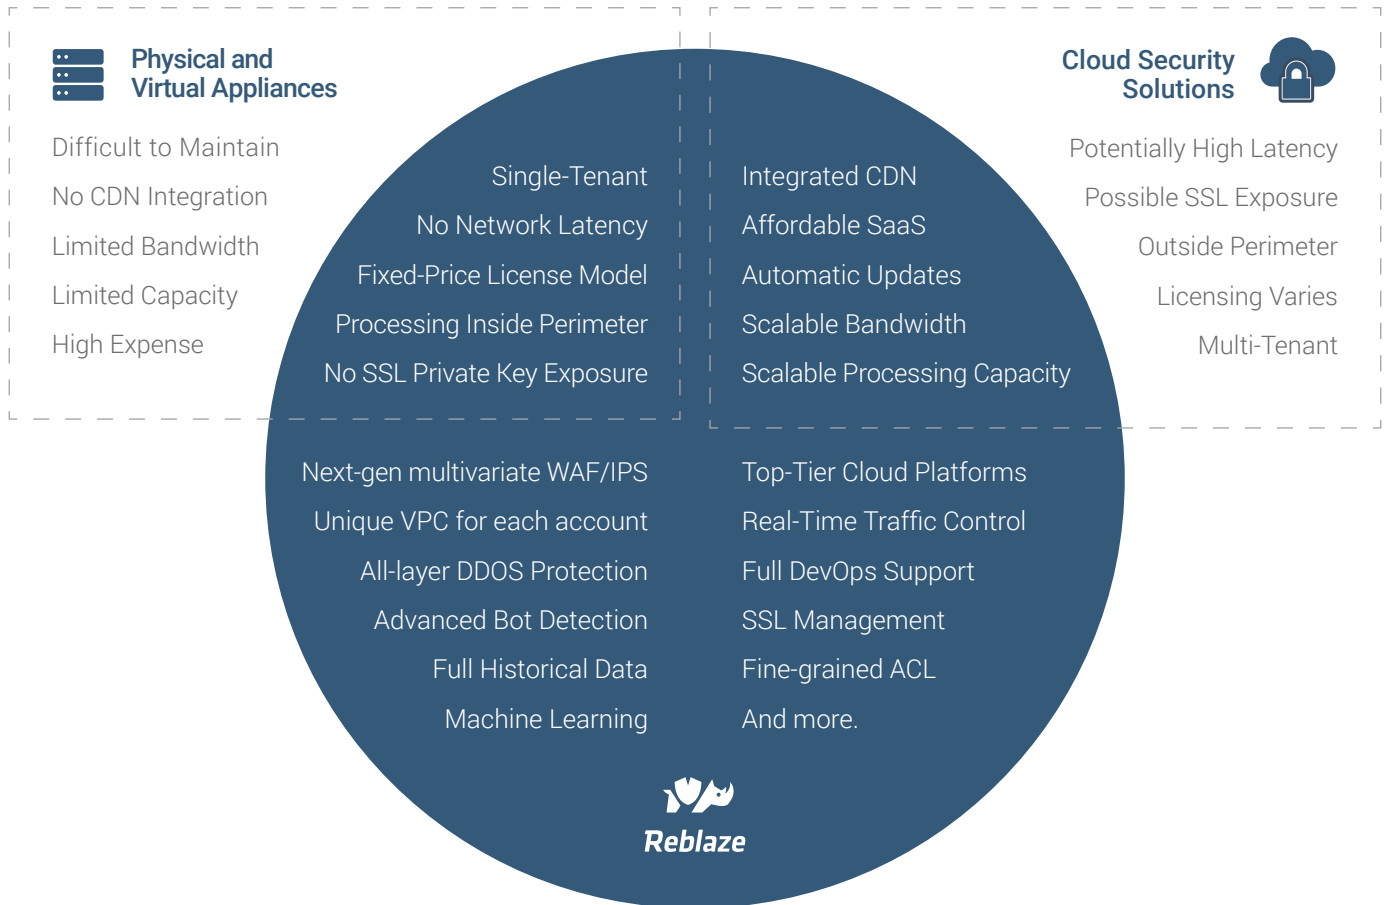

Reblaze Technologies offers an all-in-one web security platform. It includes a next-gen WAF, full-scope autoscaling DoS/DDoS protection, advanced bot management, real-time traffic monitoring & control, and more. Reblaze is fully integrated with the top-tier public cloud providers (AWS, Azure, and GCP), and runs on the customer's clouds of choice.

The platform is designed around a no-compromise approach to web security. All customers enjoy comprehensive protection, without having to purchase premium tiers or subscribe to additional services. Each customer receives a dedicated Virtual Private Cloud, eliminating multi-tenancy vulnerabilities. For maximum privacy, all traffic data is processed exclusively inside the customers' clouds (many competing solutions decrypt customer data on their own servers). Multivariate threat detection, behavioral analysis, and machine learning ensure accurate, adaptive protection.

# ADVANTAGES

Reblaze provides the advantages of appliances and cloud solutions, without their drawbacks.

## NEXT-GENERATION WAF/IPS

Reblaze defeats breach attempts, code and SQL injection, XSS, form manipulation, protocol exploits, session poisoning, malicious payloads, data theft, and other forms of attack.

## DOS/DDOS PROTECTION

Reblaze is effective against DoS/DDoS across all layers and scales, from malformed-packet DoS attempts to massive DDoS assaults.

## BOT MANAGEMENT

Industry-leading bot management prevents data theft, scraping, credential stuffing, dictionary attacks, vulnerability scans, & more.

## REAL TIME TRAFFIC CONTROL

Real-time traffic sniffing (including Layer 7) provides full statistics and visibility of **all** requests, even during large-scale attacks.

## MACHINE INTELLIGENCE

Reblaze continually analyzes global traffic data, using machine learning for accurate, dynamic threat detection. Even as new attack vectors arise, Reblaze adapts & hardens itself against them.

## FULLY MANAGED SAAS

The platform is maintained remotely 24/7 by Reblaze personnel. Your web security is always up-to-date, and always effective.

## CDN, LOAD BALANCING, AND AUTOSCALING

These accelerate your web apps' responsiveness to your users. Resources scale automatically, with no pre-warming required.

## DEEP TRAFFIC ANALYSIS

Full traffic logs and statistics enable understanding of security events, user behavioral patterns, application anomalies, and more.
