

Secure your services

Open source cloud native platform includes WAF, bot management, advanced rate limiting, layer-7 DDoS protection, session flow control, and more.

Extends NGINX and Envoy proxy to protect all forms of web traffic: sites, apps, services, and APIs.

Maximum privacy. Zero latency. Complete control.

For Developers, By Developers

- Driveable by UI and REST API
- JSON or YAML configuration format
- Git versioning as the configuration storage engine
- Supports environment branching (e.g., prod/devops/qa)

```

machine:~/curiefense/deploy/compose$ docker-compose
Creating network "curiemesh" with driver "bridge"
Creating network "confnet" with driver "bridge"
Creating uiserver      ... done
Creating confserver    ... done
Creating curieproxy    ... done
Creating prometheus    ... done
Creating echo          ... done
Creating grafana       ... done
Creating curiesync     ... done
Creating redis         ... done
Creating curielogserver ... done
Creating curielogger   ...
    
```

Maximum Privacy and Performance

- Take back control of your web security, and move it into your environment.
- Runs in containers, service meshes, load balancers, ingress gateways, and more.
- Eliminates third-party access to your data and metrics.
- Avoids third-party latency and costs.
- Real-time traffic control.
